

# MINI BREACHER'S BOOT

## Tamped Door Breaching Charge

Breacher's Boot™ is a water-tamped charge designed for breaching steel, uPVC, and wooden doors. It offers exceptional versatility, allowing the operator to adjust the explosive load and the number of charges to effectively attack a variety of targets.

This innovative tool is widely used in the UK and USA, and has been successfully utilised in the apprehension of terror suspects. It's the only charge of its kind approved for use by British police forces.

Low variable NEQ for optimised performance

Small, lightweight and easy to use either individually or in multiple charge configurations

Precision loading allows for accurate NEQ load measurement

Fielded widely in the UK, USA and Europe

# Performance

Mini Breacher's Boot™ is a compact, lightweight version of Breacher's Boot™. It is a water-tamped charge designed to be attached to the side panels of uPVC and wooden doors.

A versatile tool used by British Police Forces, Mini Breacher's Boot can attack a wide range of targets by adjusting the explosive load and the number of charges.

Mini Breacher's Boot has significant water tamping behind the charge and a Water Cushion™ between the charge and the target. This cushions the explosive's direct effect and spreads the force across the surface, imparting the maximum amount of energy without actually cutting the target. The two parts of the charge place water exactly where needed while keeping the charge small and easy to handle.

It can be loaded with precise lengths of detcord, allowing for accurate measurement and adjustment of the explosive load. Water tamping significantly reduces blast overpressure, thereby decreasing the required stand-off and the risk to the breacher.

A unique profile on the ends allows dual initiators to connect to the charge quickly without needing tape or clips. Multiple charges may be fixed together on a batten and initiated at a single point.

Designed for optimal performance and ergonomics, Mini Breacher's Boot offers consistency, simplicity, a low NEQ, and ease of use. Its size and weight make it an ideal tool for door breaching, eliminating the need for improvisation and providing operators with a reliable solution.

# Specifications

- Dimensions: 200mm x 75mm x 60mm
- Weight loaded: 0.8kg
- Minimum NEQ: 1.5g (23 grains) - single strand of 10g/m (50 grain) detonating cord
- Maximum NEQ: 4.5g (70 grains) - 3 strands of 10g/m (50 grain) detonating cord
