

BREACHER'S BOOT

Water Tamped Breaching Charge

Breacher's Boot™ is a water-tamped charge designed for breaching steel, uPVC, and wooden doors. It offers exceptional versatility, allowing the operator to adjust the explosive load and the number of charges to effectively attack a variety of targets.

This innovative tool is widely used in the UK and USA, and has been successfully utilised in the apprehension of terror suspects. It's the only charge of its kind approved for use by British police forces.

Low variable NEQ for optimised performance

Lightweight, even when loaded

Precision loading allows for accurate NEQ load measurement

Used individually or in multiple configurations

Performance

Breacher's Boot™ has significant water tamping behind the charge and a Water Cushion™ between the charge and the target. This cushions the explosive's direct effect and spreads the force across the surface, imparting the maximum amount of energy without actually cutting the target. The two parts of the charge place water exactly where needed while keeping the charge small and easy to handle.

A unique profile on the ends allows dual initiators to connect to the charge quickly without needing tape or clips. Multiple charges may be fixed together on a batten and initiated at a single point.

You can load Breacher's Boot with cut lengths of detcord or plastic explosive, allowing for accurate measurement and adjustment of the explosive load. Water tamping significantly reduces blast overpressure, thereby decreasing the required stand-off and the risk to the breacher.

Specifically engineered for optimal performance and ergonomics, Breacher's Boot ensures consistency, simplicity, low NEQ, ease of use, and manageable size and weight. It is the ideal tool for operators, eliminating the need for improvisation in door breaching.

Specifications

- Dimensions: 350mm x 100mm x 75mm
- Weight loaded: 2.15kg
- Minimum NEQ: 3g (46 grains) - single strand of 10g/m (50 grain) detonating cord
- Maximum NEQ: 27g (416 grains) - 9 strands of 10g/m (50 grain) detonating cord
