

BREACHING KIT

Comprehensive EMOE Capability Kit

The Alford Breaching Kit equips teams with a comprehensive selection of user-filled breaching charges, specifically designed to meet tactical access needs.

The kit contains a selection of explosive charges for breaching a variety of materials, including wood, PVC, brick, and concrete, at various thicknesses.

These components include:

Water-tamped explosive charges | Tamped strip/frame charges | Demolition charges
Accessories and adhesive tapes

World-renowned breaching products

Highly portable, even when filled

Use strip charges individually or to make frames

A variety of cutting, pushing and highly penetrative charges are available

The image illustrates the kit, but you can adapt the contents to suit your needs

Kit Contents

Water-Tamped Explosive Charges

The Breaching Kit includes various sizes of water-tamped explosive charges with a range of tactical applications.

The renowned Gatecrasher™ is a wall-breaching charge that can make a man-sized hole in walls up to 50cm thick. If your operations require it, we can provide Gatecrasher in a rollable, modular variant for easy deployment.

Breacher's Boot™ and Mini Breacher's Boot™ punch through a wide range of doors, including heavy fire doors, and you can request them as part of the kit.

Tamped Strip/Frame Charges

Deploy Alford Strip™ charges as straight lengths or build them into a frame using corner and T-joint pieces. We fill each charge with an inert water-based gel to enhance tamping and minimise fragmentation. We supply Alford Strip™ in 25 mm and 42 mm diameters.

Demolition Charges

We can provide the Universal Demolition Block (UDB)™ charge in two sizes on request. Use UDB to breach compound walls, conduct countermine tasks, or carry out general demolition. Developed specifically to carry PE7 blocks and most types of plastic explosive, the explosive can be inserted either in its original wrapping, cut to size, or moulded into the slide-out explosive tray.

Accessories and Adhesive Tapes

We include corner pieces and T-joints with the Alford Strip™ charge so you can build frame charges. We also provide end caps, allowing you to cut the strip to shape and secure the water-based gel inside the charge. We include two types of adhesive tape: one for wet conditions and one with high adhesive strength for firm positioning.

Optional Extras and Spares

We offer additional products for breaching teams that require a C-IED capability. You can purchase spare charges and accessories as you use them.
