

UDB

UNIVERSAL DEMOLITION BLOCK

Versatile Modular Explosive Charge

The deceptively simple Universal Demolition Block™ (UDB) is a user-filled, modular, nonmagnetic explosive charge for demolition or EOD operations. It can serve as a small, standard explosive charge or as a booster charge for larger charges.

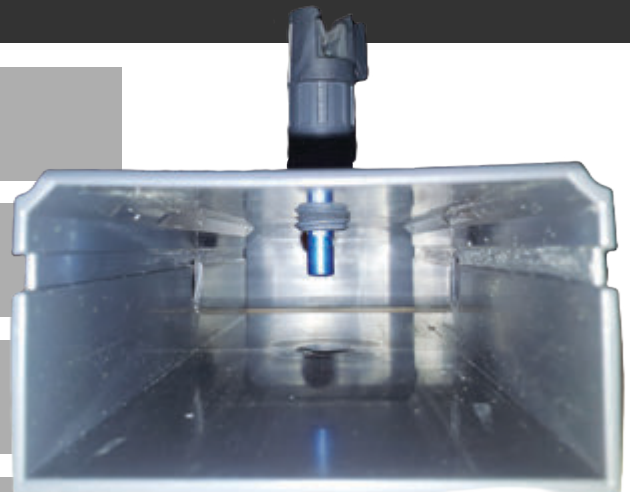

UDB, with its innovative matchbox concept, is highly versatile and is successfully used worldwide for breaching, countermining, and demolition.

Highly modular and configurable

Easy to set up and deploy

Available in two sizes (250g and 500g)

UDB500 can accommodate most plastic explosive blocks

Performance

Available in two variants - UDB250 (beige) or UDB500 (grey) -, UDB can carry 250g or 500g explosive blocks. It features two sliding parts – a tray for holding either 250g or 500g of plastic explosive, and an outer sleeve that not only contains and protects the explosive but also provides multiple attachment and initiation options.

Deploy UDB individually or as linked multiple-charge configurations. Operators can join individual charges lengthways or widthways by using integral interlocking projections on the sides to make larger charges. UDB has three initiation points: two on the side and one on the end.

Developed to carry most types of plastic explosive, the explosive can be inserted either in its original wrapping, quickly cut to size, or moulded into the slide-out explosive tray.

Each Universal Demolition Block is supplied with its own accessory pack to enable interconnection, the fitting of initiators, attachment pad eyes, and blanking plugs.

Specifications

	UDB250	UDB500
Weight empty	100g	120g
Weight loaded	350g	620g
Dimensions	58 x 117 x 30 mm	58 x 195 x 30 mm
NEQ	250g	500g
