

# DRAKEN

## General-Purpose Barrelled Water Disruptor

Draken™ is a versatile water disruptor designed for RSP against IEDs in containers like parcels and briefcases, or for disrupting components such as power sources and switches.

It offers performance comparable to both the PigStick Disruptor and PigStick Lightweight Disruptor, depending on the chosen barrel.

A highly sustainable solution for IED disruption

Variable disruptive performance

Simple to operate

Ideal for operations in remote environments

# Performance

Key features include the ability to operate in areas with limited ammunition access, powering the device with a self-loaded 12-gauge cartridge case and a common electric squib. The kit includes cartridge cases, squibs, and wads, while users simply need to source double-based propellant locally. Made from stainless components, the Draken system is durable and requires minimal maintenance.

Designed for simplicity, it features two screw-on barrels that facilitate easy charging without the need for a complex piston. Its robust design reduces recoil, allowing for effective use from ROVs without specialised recoilless technology. Loading cartridges takes less than two minutes and does not require any additional tools.

Draken is supplied in a hard case with a tool roll, ideal for carrying on operations. All tools required for cartridge assembly and system maintenance are included in the case, along with consumables for 50 shots.

Further, the Draken's consumables are low-cost, making its lifetime cost far lower than that of existing systems.

# Specifications

## Fitted with long barrel

- Total length: 550mm
- Weight: 4.75kg
- Volume of projected water: 100ml
- Muzzle velocity: >300m/s

## Fitted with short barrel

- Total length: 380mm
- Weight: 3.85kg
- Volume of projected water: 50ml
- Muzzle velocity: >300m/s
