

GATECRASHER

Wall Breaching Charge

Gatecrasher™ is the original water-tamped wall-breaching charge, offering exceptional versatility and performance. It creates openings large enough for a person to pass through in walls up to 500 mm (20 inches) thick.

You can load it with detonating cord, plastic explosives, or sheet explosives, making it effective against a wide range of targets, and significantly less NEQ than competing breaching products.

Outstanding breacher protection features

Ergonomically designed for swift, simple placement

Can be loaded with plastic explosive, detonating cord or sheet explosive

21kg when loaded

Performance

Water tamping significantly increases the explosive's power, allowing a smaller amount of explosive material to achieve a successful breach. This reduces the required safety distance by at least half and minimises the charge's forward fragmentation.

Gatecrasher is the preferred wall-breaching charge by the breaching community and is trusted by military and law enforcement personnel globally.

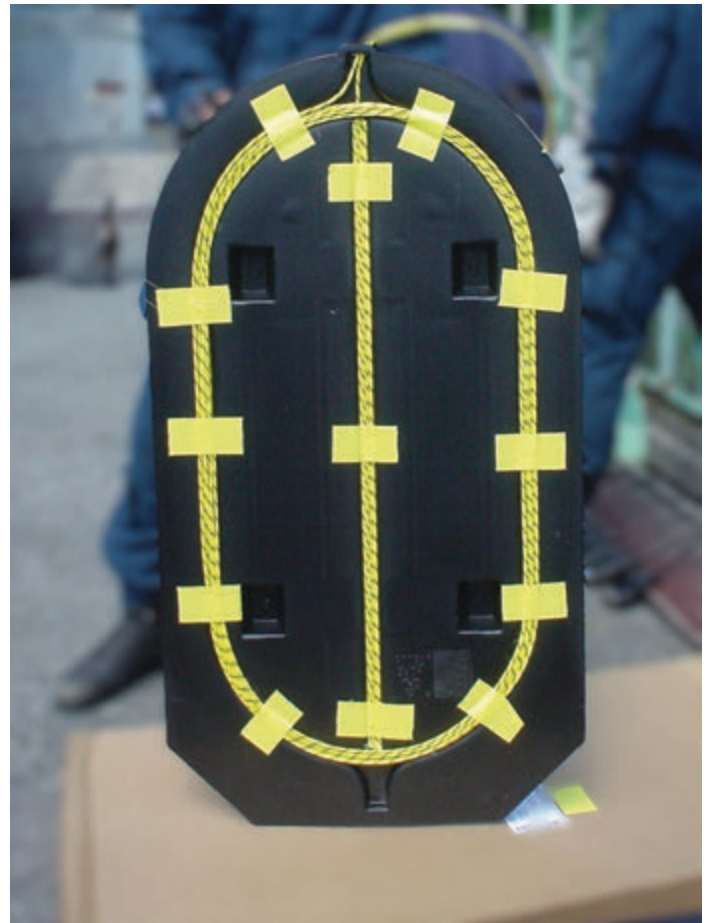

Specifications

Charge Specifications

- Dimensions: 580mm x 1090mm x 60mm (W x H x D)
- Weight empty: ~4kg
- Weight loaded: ~21kg
- Water volume: 14.25 litres
- NEQ: 35g single strand 10g/m detcord 3kg PE

Typical Loads

- Single Brick: 8 strands of 10g/m detcord
- Double Brick: 6mm sheet explosive
- Triple Brick: 9mm periphery, 12mm centre. Full load of PE4 with inserts
- Quadruple Brick: 12mm periphery, 15mm centre
- Above 50cm (20in): Full load of PE4 without inserts
