

GATECRASHER MODULAR

Modular Wall Breaching Charge

Gatecrasher Modular™ is a portable alternative to the Gatecrasher. It is a water-tamped charge designed for breaching walls or solid structures.

The system consists of straight modules that can be arranged in various configurations to create charges of different sizes and loads. This versatility allows for customisation, enabling operators to tailor the charge to fit the specific needs of their operation.

Variable NEQ, powerful effect

Two versions available

Modular, portable, and compact

Simple to set up and deploy

Performance

Each module can be secured in the Tactical Sleeve, making it easy to roll up and position quickly, even in confined spaces.

There are two available versions: Type 1, which features an explosive charge in direct contact with the target, and Type 2, which includes a linear cutting charge for enhanced penetration.

Specifications

TYPE 1 - WATER TAMPED BREACHING CHARGE

Direct contact charge for walls and other solid structures. Has three 15mm deep pockets for sheet explosive, plastic explosive or detonating cord. The NEQ of each module can be varied from 20g to 180g.

TYPE 2 - WATER TAMPED WITH LINEAR CUTTING

Features a specially designed linear cutting charge with an NEQ of 300g. This version cuts the target with deeper penetration. Operators can remove the shaped charge liner and fill the cavity with explosives, if required.

GATECRASHER MODULAR TACTICAL SLEEVE

Made of nylon, covered in Velcro, and has four pockets to insert the charges. Individual pockets can be repositioned on the sleeve as required. Pockets at either end of the outside of the sleeve allow it to be positioned on the target using a prop stick.

Charge Width	Height (4 modules)	Weight (per module)	Type 1 Min. NEQ	Type 1 Max. NEQ	Type 2 NEQ
0.6m	1.2m	3.75kg	20g	180g	300g
