

Vulcan™ is a highly versatile user-filled shaped charge system which is in wide service around the world. Used as a low-order tool, it has probably been used against a wider range of munitions than any other low order system, and has a virtually unrivalled success rate. It is the only known tool that can reliably low-order a BLU-109 deep penetration bomb and has been used against everything from grenades to rockets and even cruise missiles. Vulcan™ forms the backbone of our Counter-Limpet Mine System.

Vulcan<sup>™</sup> is a modular shaped charge which can be used for many different tasks including low-order destruction, deliberate detonation and trepanning and is suitable for both land and underwater use.

## Features include:

- > Highly modular and versatile shaped charge system
- > Disintegrates on firing, no dangerous fragment projection
- > Low NEQ & produces a highly predictable effect
- > Easy to load & configure

Vulcan<sup>™</sup> Shaped Charge System can be used for multiple tasks depending upon which projectile or accessory is used. Vulcan<sup>™</sup> Basic Kit incorporates 10 charge bodies.

#### **Projectiles**

Copper Cone Set, Jet Forming: Produces a jet which may be used to pierce holes through about 75mm (3in), mild steel or thicker concrete or brickwork, or to cause the detonation or deflagration of steel-cased ammunition. NEQ 20g-50g. 10 cones per pack. NATO Stock No. (NSN): W8 1385-99-285-4051.

Copper EFP Set: Generates an explosively-formed projectile (EFP) which may be used to penetrate robust targets at much great ranges than the jet-forming cone. Enables Vulcan™ to be used as a de-armer and disruptor device. NEQ 20g-50g. 10 EFPs per set. NATO Stock No. (NSN): W8 1385-99-131-4488.

Magnesium Cone Set, Jet forming: Less penetrating than a copper cone, but still easily able to penetrate even thick-walled shells or bombs and ignite the explosive or pyrotechnic filling. NEQ 30g-50g. 10 per pack. NATO Stock No. (NSN): W8 1385-99-925-0172.

Magnesium EFP Set: Generates an explosively-formed projectile (EFP) which may be used to form large (20mm diameter) holes in 5mm thick steel targets from at least 2500mm stand-off. NEQ 20-50g. 10 per pack. NATO Stock No. (NSN): W8 1385-99-147-5891.

Aluminium EFP Set: Delivers a powerful blow to remove shell fuses and bomb pistols or jam their mechanisms. Provides a low-cost disposal alternative to de-armers that use heavy steel barrels. NEQ 15-50g. 10 per pack. NATO Stock No. (NSN): W8 1385-99-837-0017.

Liquid Projectile Set: A pair of plastic cones shapes a water projectile which penetrates steel-cased munitions with thickness of up to 10mm. NEQ 10g-30g. 10 per pack. NATO Stock No. (NSN): W8 1385-99-131-4430.

Vulcan Projectile Combo Set: A combination set containing two of each Vulcan<sup>™</sup> projectile including copper, magnesium, aluminium and liquid projectiles. NATO Stock No. (NSN): W8 1385-99-447-3037.

### Accessories

Nozzle Set™
Underwater Stand-off Capsule™
Trepanning Attachment Set™
Flash Suppressing Water Jacket Set™
